Abstract

This is the abstract.

It consists of two paragraphs.

Keywords: covid19; R

1 Introduction

In the mist of a virus pandemic, the analysis (use a fancier term) of the constant flow of epidemiological data is of paramount importance not only to guide the implementation and evaluation of non-parmacological interventions, but also to optimize drug development.

- Examples of epdidemiological alone or + dother data guiding interventions:
  [Kissler et al., 2020]: proposed non pharmacological intervention

[Wu et al., 2020]: correlation p2.5
BCG: clinical trial on BCG
We need data banks, repositories of aggregated data

- Examples of that and databanks of epidemiological as well as genetic data. The traking project

- Examples of R package ccdcovidview
